

VT10W WALL CONTROL INSTALLATION

Locate the control

- On the ground floor of the house.
- In the center of the house, within the airflow (hallway, living room, dining room).
- At approximately 60 inches from the floor.

Use template on the back of this page:

The two black marks indicate where to drill both screw holes for screwing the control on the wall. The 3 grey areas indicate the wire hole options. Before drilling any holes, make sure the template is positioned so that the wall control will be upright.

Connect the wires to the wall control following the color code (YELLOW wire to “Y”; RED wire to “R”; GREEN wire to “G” and BLACK wire to “B”:
